

CHRISTENSEN'S PLANT CENTER

Wholesale Supplier To Landscape Professionals

NEW LANDSCAPE LIGHTING HARDWARE HAS ARRIVED!

We've made it to October! The mornings are a bit brisk, it's comfortable weather to work in all day, and colors are changing everywhere you look. With that being said, the daylight hours from here on out will begin to get a little bit shorter every day. In a previous article in August, I wrote about adding lighting to a new or pre-existing landscape. It's still not too late to do this, and we've made it a little more inexpensive to boot!

Sollos Lighting has released even smaller transformers! We will now have 100 watt and 200 watt transformers available. Both of these new transformers have built-in timers and an integrated photocell, just like the Sollos 300s. These are IDEAL for installing an LED system for your customers that may be on a tighter budget than expected, or they may just want to light a smaller area. Either way, all of these transformers are very affordable.

Lighting adds beauty, safety, and security to anyone's home, in addition to adding a 4 season effect. For those customers that live in a more wooded setting, you may wind up lighting up an area that has unexpected deer traffic. At that point, you will want to take a review of Dan's article in regards to deer deterrents, or try Kevin's solution, but for that you will only have a two week time frame in mid-November.

If you have a lighting job in the works, give us a call for quoted pricing and availability. If we don't have the product in stock, the turn around time to receive material is usually 3 business days.
