

This one is a 'Regal Prince'

A recent introduction to the marketplace is the 'Regal Prince' Columnar Oak. It is an upright growing tree with many great characteristics. Very hardy and adaptable to many different soil conditions. It is a cross between Q. bicolor – Swamp White Oak and Q. robur 'Fastigiata' – Columnar English Oak.

They are typically grafted onto Q. bicolor rootstock which allows them to thrive in wet or dry, well drained or clay soils. A vigorous grower reaching 40 to 50 feet tall with a spread of 15 to 20 feet. Very attractive glossy green foliage in summer. Great accent piece or tall-growing screen. Transplants well and looks good here and on jobsites. Would perform well planted in a parking lot island or more formal street tree. Nice alternative to the Columnar European Hornbeam that can be picky about the soil conditions.

This is a tree that actually lives up to its name!
