

## Oh, the evils of mother nature.

We are now stocking a great new poison ivy and poison oak treatment cream called Zanafel. Not only does it stop the pain and the itching, it removes the toxin responsible for the reaction, urushiol. Zanafel removes urushiol by binding with it to create a cluster which in turn can be

quickly and effectively washed away. It can be used on all areas of the body and by children and pregnant or nursing women.

Experts believe that unless you wash within the first 10 minutes, the oil will bond to the skin and Zanafel is the only substance known to remove the oil. Some spots may contain more urushiol than others and require a second washing. If you feel any itching whatsoever you have not properly completed the first treatment.

Zanafel has specific directions for use, for best results adhere to the directions on the box. I heard people are itching to try this one out, ha ha.
